Software Engineer with 5+ years of experience. I build the application and the server it runs on: frontends and APIs with React, Next.js, NestJS and Java; infrastructure with Docker, Linux, CI/CD, AWS and Kubernetes; and automation with n8n and AI agents. Currently a Junior Engineer at NTT DATA serving banking clients, while freelancing for real clients on the side and running my own production server end to end.

PROFESSIONAL EXPERIENCE

NTT DATA

Junior Engineer

Remote

March 2025 – Present

- Work with banking clients on the Temenos core banking platform, adapting to each client's tools and workflows.
- Troubleshoot and fix bugs in Java, tracking every case in the client's tooling (Azure DevOps: work items, repos and pipelines).
- Handle incidents, ship improvements and help build new features across test and production environments, validating data in Oracle (RDS) with DataGrip.
- Move between each client's consoles and servers on Linux, reaching EC2 bastion hosts through SSM and reviewing logs and metrics in CloudWatch.
- Client infrastructure: AWS (EKS, RDS Oracle, EC2, Transit Gateway, S3), Kubernetes with Helm, KEDA, Karpenter and Istio, Terraform and Docker.
- Daily tools: IntelliJ IDEA, VS Code, DataGrip, Git and Bash.

Freelance Fullstack & DevOps — Workana

Client projects, alongside NTT DATA

Remote

January 2026 – Present

- Real clients: **3Destiny** (custom WordPress theme deployed on AWS EC2 with SSM, Route53 and Let's Encrypt; Lighthouse 100 for SEO and accessibility), **Orthodont** (multilingual WordPress + WooCommerce), **Argentina Local Expert** (Systeme.io funnel with a built-in lead CRM; 5-star review) and **Diamante** (baseball scoring app in React Native, in progress).
- Run my own VPS (Ubuntu 24.04) with Docker Compose, Caddy as a reverse proxy with automatic TLS, hardening (ufw, fail2ban, key-only SSH, unattended upgrades) and backups with tested restores for databases and n8n workflows.
- Incident response: after a brute-force intrusion through a staging site, I recovered the data, rebuilt the server from scratch, hardened it and rotated every credential.
- Built a control panel (Fastify/TypeScript) that starts and stops demos on demand with RAM and load capacity rules; uptime checks with a weekly report to Telegram.
- CI/CD with GitHub Actions (SSH + rsync deploys, Vitest and Playwright E2E) and 13 projects on Vercel with Neon and cron jobs.
- n8n in production (Telegram bots, Gmail, state in Postgres, human approval over chat) and an automation pipeline with AI agents: headless Claude Code in Docker with a watchdog.
- Custom development: WordPress/WooCommerce themes and plugins (REST API booking engines, quote calculators, CRMs) and SaaS on Next.js + Drizzle + Neon.

Evaluar

Fullstack Developer

Cuenca, Ecuador

March 2024 – May 2024

- Worked as a fullstack developer with Vue, React, Nuxt, Next.js, NestJS and Java, turning product requirements into new features.
- Owned the deployment of several frontend and backend projects at the end of each sprint.

- Built APIs connecting the company's projects and improved data-handling endpoints; added query caching to cut unnecessary database calls.
- Developed endpoints on AWS services (S3, DynamoDB) and optimized DynamoDB queries.

Evaluar

Cuenca, Ecuador

Frontend Developer

March 2022 – April 2023

- Built features with Vue, React, Angular, Nuxt and Next.js from product requirements, and deployed the frontend projects (Vue 2, Nuxt 2-3 and Next.js) at the end of each sprint.
- Improved the responsive behavior of many components and integrated in-house and third-party REST APIs.
- Improved shared Storybook components used across the company's projects, plus screen transitions with loaders and skeletons.
- Optimized repeated queries with the Vue Apollo cache, improving the app's response time.
- Unit tests with Testing Library and Jest; teamwork with Jira, Figma, GitLab, Notion and Miro.

Trompo Mobiliario Infantil

Cuenca, Ecuador

Fullstack Developer

October 2021 – January 2022

- Designed the PostgreSQL database schema and built the backend: a REST API with NestJS, TypeScript, TypeORM and auth, securing every endpoint.
- Built the frontend with Next.js, TypeScript and TailwindCSS (responsive) and a React Native app to manage the website's content.
- Containerized frontend and backend with Docker for deployment on Vercel and Render respectively.

GAD San Fernando

Cuenca, Ecuador

Fullstack Developer (internship)

June 2021 – September 2021

- Informational web app bringing together the canton's activities, history and notable people.
- React SPA (React Router, Redux); NestJS backend with MySQL and TypeORM; deployed on an on-premise CentOS server with Docker containers.

Capstone project

Cuenca, Ecuador

Fullstack Developer

Sep 2018 – June 2024

- App to manage assets and products for maintenance and sales: MongoDB API with auth, hexagonal architecture and vertical slicing, ChatGPT integration to interpret sales data, and CI/CD with Docker, DigitalOcean and GitHub Actions.
- Flutter mobile app (clean architecture, Atomic Design) with a dashboard of date-filtered charts.

EDUCATION

Universidad Católica de Cuenca

Cuenca, Ecuador

B.Eng. in Software Engineering

June 2024

- Programming fundamentals, OOP, software architecture, algorithms; relational and NoSQL databases; networking; microservices; information security; DevOps; unit testing.
- Languages: Java (Spring Boot), Python, C#, C++. SPA framework: Angular.

TECHNICAL SKILLS

- **DevOps & infrastructure:** Docker, Docker Compose, Caddy, Nginx, Linux (Ubuntu), systemd, cron, Bash, ufw, fail2ban, GitHub Actions, DigitalOcean, Cloudflare (Tunnels), Vercel.
- **AWS & Kubernetes:** AWS (EKS, RDS Oracle, EC2, SSM, Transit Gateway, S3, Route53, CloudWatch), Kubernetes, Helm, KEDA, Karpenter, Istio, Terraform.
- **Languages & frameworks:** TypeScript/JavaScript, Java, PHP, Python, React, Next.js, Vue, Nuxt, Angular, NestJS, Express, Fastify, React Native, Expo, Flutter, TailwindCSS.
- **Databases:** PostgreSQL, Neon, Oracle, MySQL/MariaDB, MongoDB, DynamoDB, SQLite; Drizzle and TypeORM; authentication with Better Auth.
- **Automation & AI:** n8n, Anthropic SDK and AI agents (headless Claude Code), Telegram Bot API; AI assistants in daily work (Claude Code, GitHub Copilot).
- **CMS & platforms:** WordPress, WooCommerce, Elementor, Systeme.io, Temenos.
- **Testing & QA:** Playwright (E2E and layout sweeps), Vitest, Jest, Testing Library, Lighthouse.
- **Tools & methodology:** Git, GitLab, Azure DevOps, Jira, Figma, IntelliJ IDEA, DataGrip, VS Code; Scrum.
- **Languages:** Spanish (native), English (B1).
